

Money and Banking Statistics¹ – September 2024

Household deposits increased by €4.7 billion, or 3.1 per cent, in the year to end-September 2024. As observed in past months, this movement was driven by **deposits with an agreed maturity of up to 2 years**, which recorded a positive annual growth in September, offsetting the ninth consecutive drop of annual **overnight deposits flows**. Despite a continued positive annual growth of **deposits with a maturity up to 2 years**, September brings an end to 15 consecutive months of rising annual flows for that category. However, these movements are contributing to a slowly decreasing share of **overnight deposits**, which represented 87.3% of the total **stock of household deposits** at September-end.

Annual household deposits flows remained positive in September. Overnight deposits dropped for the ninth month in a row while term deposit flows remain stable.

Developments in Household credit and deposits

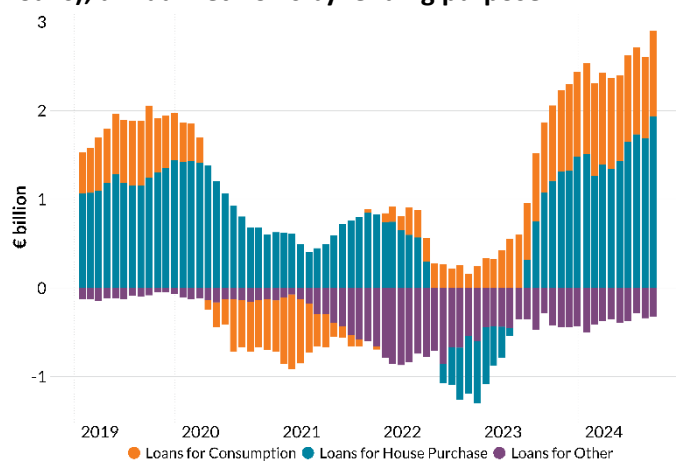

- **Net lending to households** stood at €544 million in September 2024 (Chart 1). This was mostly driven by **loans for house purchase**, with a €470 million increase, and to a lower extent by a €102 million increase in **consumer lending**. **Loans for other purposes**, on the other hand, dropped by €28 million in the month.
- In annual terms, **net lending to households** increased by €2.6 billion, or 2.6 per cent, in the year to end-September (Chart 2). This falls to 2.4 per cent after accounting for the impact of repayments on securitised loans. Similarly to previous months, this was mostly driven by **loans for house purchase** and **consumer lending**, with a contribution of €1.9 billion and almost €1 billion, respectively, in the year to end-September 2024.
- **The annual change in loans for house purchase²**, including on-balance sheet and securitised loans, was 2.2 per cent in the year to end-September 2024 (see [Table A.6](#)). This is a new record and in line with historically high rates observed in previous months.
- **Household deposits** increased by €159 million in September 2024 (Chart 3) and stood at €157.5 billion at the end of the month. This was driven by a €647 million increase in **term deposits** during the month against a drop in **overnight deposits** worth €476 million.
- On an annual basis, **household deposits** flows were positive at €4.7 billion, or a 3.1 per cent annual growth, driven by an €8.3 billion increase of **deposits with an agreed maturity up to 2 years**. **Overnight deposits**, on the other hand, dropped for the ninth consecutive month, recording a negative flow of €4.4 billion in the year to end-September.

Developments in NFC credit and deposits

- **Net lending to non-financial corporations (NFCs)** was €444 million in September 2024, mostly driven by short term lending, which increased by €418 million. On an annual basis, NFC lending increased by €1.1 billion, or 3.9 per cent, in the year to end-September. Similar to monthly developments, positive annual flows were mostly driven by **short-term loans**, with a contribution of €752 million, and to a lesser extent, by **long-term loans** worth €469 million (Chart 4).
- **NFC deposits** dropped by €2.5 billion in September 2024 after a half a billion drop in the previous month (Chart 5). In annual terms, NFC deposit flows remained positive at €4.4 billion, or a 5.6 per cent annual growth, in the year to end-September. This was mostly driven by positive annual flows of **deposits with an agreed maturity up to 2 years'** worth €2.6 billion, and to a lesser extent, by **overnight deposits**, contributing with a net inflow of €1.2 billion in the year to end-September 2024.

Other developments in the period

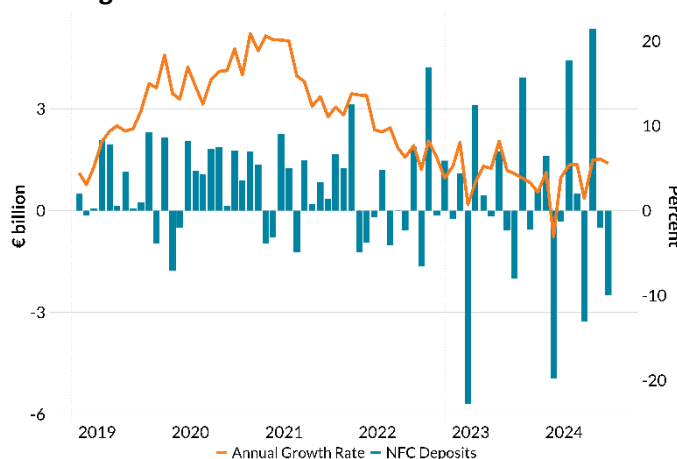

- **Total bank lending** to the Irish private sector increased by €4.3 billion, or 3 per cent, in the year to end-September 2024 (Chart 6), and the stock stood at €149.1 billion at the end of the month.
- In annual terms, total flows were driven by loans to **households** and to **NFCs**, together contributing with €3.7 billion in the year to end-September, as mentioned in the relevant sections above.
- Lending to **insurance companies and pension funds (IC/PF)** remained muted in the same period, while loans to **other financial intermediaries (OFIs)** recorded positive flows of €606 million.

Note 1:

Money and Banking statistics cover all credit institutions resident in Ireland. This includes licensed banks, building societies and, since January 2009, credit unions. A resident office means an office or branch of the reporting institution which is located in the Republic of Ireland. Data are reported in respect of resident office business only. Recent data are often provisional and may be subject to revision. For further detail, please see the [Money and Banking](#) webpage for:

- An extensive set of [Money and Banking Tables](#);
- A list of [Irish Resident Credit Institutions](#);
- [Money and Banking statistics Explanatory Note](#).

Irish-headquartered banks refers to institutions whose ultimate parent entity is resident in Ireland.

Note 2:

A number of lenders have agreed payment breaks with their customers since the onset of the COVID-19 crisis. These breaks are likely to significantly affect the Money and Banking lending data in this period, predominantly by keeping outstanding loan balances higher than they would be, had repayments followed their initial schedule. As well as this, end-quarter months' data is affected by quarterly interest capitalisation, which increases balances in on-quarter months.

Note 3:

Convenience credit debt is defined as the credit granted at an interest rate of 0 per cent in the period between payment transaction(s) undertaken with the card during one billing cycle and the date at which debit balances from the specific billing cycle becomes due. Extended credit debt is defined as the credit granted after the due date(s) of the previous billing cycle(s) has/have passed, for which an interest rate is charged.

Note 4:

Treatment of securitised loans

As a result of an update to the ECB Regulation *'on the statistical reporting of balance sheet items of credit institutions and of the monetary financial institutions sector (recast) (ECB/2021/2)'*, there have been changes to how certain securitised loans are required to be classified for the purposes of statistical reporting. The below treatment, allowed under the previous

Regulation, is no longer permitted under the updated Regulation:

'MFIs (...) may be allowed by their NCB to exclude from the stocks (...) any loans disposed of by means of a securitisation in accordance with national practice (...)'

The removal of this clause means that banks are now required to report all previously excluded securitised balances within their on-balance sheet stocks of outstanding loans.

This has resulted in an increase in the on-balance sheet stock of house purchase loans in tables such as Table A.1 and Table A.4. These securitised loans were already captured in Table A.6, which combined on-balance sheet and securitised loans since the series began in January 2003. This change does not impact on published transactions and growth rates for January 2022. As a result of this change, we will be discontinuing publication of confidential series within table A.6 in the future.

Note 5:

In March 2023 the outstanding amounts and transactions of domestic household deposits increased following the entry of a credit institution into the Irish market. Without this addition the household deposit growth in the year would have been lower still.

Statistical classification of sole proprietors

In line with their treatment in ESA 2010, the Central Bank is harmonising the treatment of sole proprietors by reporting agents across various datasets. This has resulted in a reclassification of loans and deposits from the NFC to the Household sector. These amendments have been made with respect to January 2022 reference data, with revisions to historical data to follow. Specifically, these changes mean an increase in loan and deposit balances reported against the household sector, and a decline in balances reported against the NFC sector. This change does not impact on published transactions and growth rates for January 2022.
